

Integrated MSDS Data for MSDgen

Productive and Accurate Development of Hazard Communication Documentation

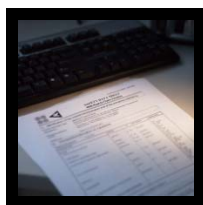

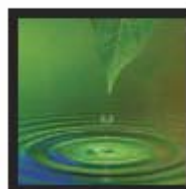

Productive Data Sharing Across MSDS Authoring and MSDS Management

3E Integrated MSDS Data for MSDgen is a new vendor material safety data sheet (VMSDS) solution that integrates 3E Company's material safety data sheet (MSDS) management services with the MSDgen® MSDS authoring system. The new solution features powerful data sharing capabilities, which facilitate the more efficient development of hazard communication documentation and enables more effective management of vendor raw material MSDSs.

Critical Data Extraction and Loading

3E Integrated MSDS Data for MSDgen enables customers to efficiently load and update the data found on vendor MSDS documents into MSDgen, dramatically reducing the amount of time required to acquire and access these documents and data. 3E Integrated MSDS Data for MSDgen extracts key physical-chemical data, such as boiling point, physical state, density, flash point, etc., for loading into MSDgen as key raw material inputs to be used in the development of product level hazard communication documentation. The seamless integration of indexed data from the raw material MSDSs streamlines the authoring process, eliminating the need for the MSDS author to manually enter this information into MSDgen. Batch uploads enable authors to upload data for all products, all at the same time.

Regulatory & Compliance Information Services**

MSDS Obtainment and Revision Alerts

3E Integrated MSDS Data for MSDgen combines MSDS content, including both data and documents, with the ability to import that data into MSDgen. 3E Integrated MSDS Data for MSDgen users are able to leverage 3E's unique MSDS obtainment capabilities, in which 3E Company's team of expert researchers obtains MSDSs for customers. This team is constantly collecting and processing new and revised MSDS documents on the customer's behalf, then extracting relevant data and incorporating that new information into 3E Company's extensive hazardous materials information database. In addition to receiving update files, customers may purchase 3E's Revision Alert module, which provides weekly notification reports of all MSDSs that have ingredient or GHS classification changes as compared to the previous version of the MSDS.

Bringing Together the Best of Both Worlds and the Best of the Best Systems

3E Integrated MSDS Data for MSDgen brings together the best of the often painfully separate worlds of MSDS management and authoring, with this integration of the award-winning MSDS Management and MSDgen platforms. The integrated solution provides manufacturers with a powerful tool for managing chemical product safety and product stewardship, both upstream and downstream.

Getting started and on-going support

A list of vendor products is all that is required to get started. 3E cross references the list against its MSDS library, and in turn provides the data for loading into MSDgen using the Indexed Image Option. The 3E team keeps the vendor MSDS data up to date, with updates provided on a pre-determined schedule. Users can opt to receive notification of which specific data value changed on the revised MSDS via the Revision Alert module.

Employee Access

3E Integrated MSDS Data even provides employees with online access to vendor MSDSs residing within MSDgen by leveraging MSDgen's MSDSviewer search and retrieval tool.

Proactive obtainment from your suppliers

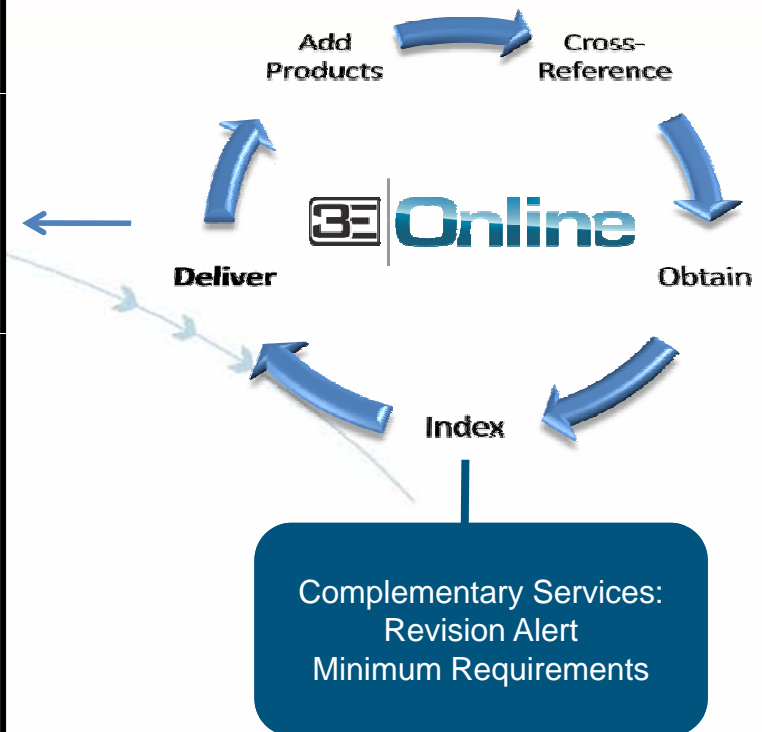

In the event an MSDS on the list provided doesn't already exist in the database, 3E will proactively obtain it directly from the supplier on your behalf. 3E can also assume the burden of maintaining MSDS revisions on an ongoing basis. 3E employs a full-time staff of Manufacturer Relations specialists who maintain relationships with tens of thousands of manufacturers. This team is dedicated to ensuring the database is kept current according to the regulations.

World-renowned database

3E Company has spent more than two decades developing the world's premier hazardous materials information database, containing millions of current MSDSs, both images and data, as well as related chemical information, regulatory information and professional resources. 3E maintains one of the world's largest collections of MSDSs with the total growing every day.

Full Chemical Lifecycle Management

3E Company's comprehensive suite of data products and information services enables improved compliance with global EH&S requirements related to the safe manufacturing, distribution, transportation, usage and disposal of chemicals and hazardous products. Whether you are a manufacturer, distributor, transporter, retailer or corporate user of chemicals or hazardous products, 3E can deliver a program specific to the EH&S compliance needs of your organization that provides benefits to the entire enterprise and throughout the supply chain. 3E Company's full product lifecycle and supply chain approach provides a single, integrated solution for managing EH&S capabilities, resulting in reduced cost, risk and liability while improving business and compliance processes.

EH&S Solutions

At 3E Company, we understand the business and burden of EH&S information and compliance management. 3E is a comprehensive, one-stop solution for content, tools and services for companies that want to take effective leadership and control of their product stewardship and EH&S compliance activities. Our products and services help companies make the transition from simply managing for compliance, to cutting-edge business practices that deliver tangible and sustainable results.
