

Ariel™

ADM-VMSSDS 3.0 Alert

Ariel Data Manager™(ADM)-VMSSDS helps SAP EHS Management users manage their vendors' global inbound MSDSs within the SAP EHSM platform. By combining MSDS content, both data and documents, with a loading tool for importing data into SAP EHSM, ADM-VMSSDS dramatically reduces the amount of time required to manage inbound vendor raw-material MSDS documents. When combined with 3E Online-MSDS, the solution set provides employees with easy-to-use online access to the same MSDSs as those in the SAP EHSM system.

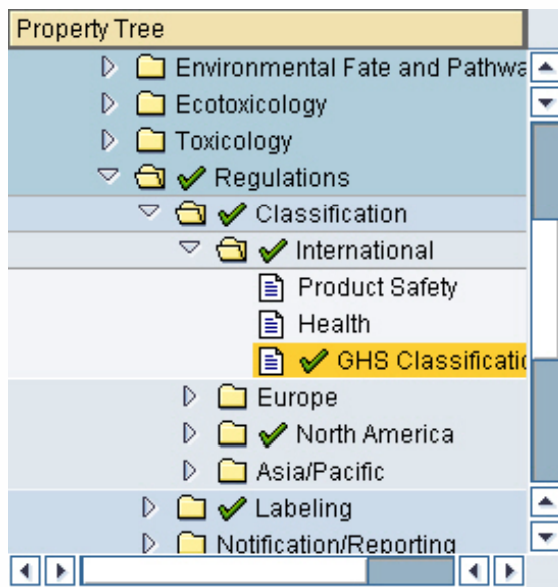

What's New

The latest version of ADM-VMSSDS offers powerful new features including:

- Access key physical-chemical properties, compositions and regulatory data, including GHS classification and labeling data, and NFPA, HMIS and SARA classification data
- Quick identification of what data has changed on vendor MSDSs when a revision is issued

Key Classification Data and Streamlined Data Management

ADM-VMSSDS offers access to key physical-chemical properties, compositions, and regulatory data, including GHS classifications and labeling, NFPA, HMIS and SARA classifications. The data is imported directly into the Standard Properties Tree of SAP EHSM, eliminating cumbersome manual processes to collect and upload the data. Once in SAP EHSM, the data can be leveraged to run mixture classification rules, as well as other product compliance activities related to Substance Volume Tracking, such as those required by REACH and TSCA.

Trusted Global Provider of Chemical,
Regulatory & Compliance Information Services

Bulk Updates with Flexible Options

ADM-VMSDS enables users to perform bulk updates directly into SAP EHSM, and provides an option to store a full MSDS in the system or, if preferred, a link to the 3E Online-MSDS.

Multilingual Support

ADM VMSDS supports the management of GHS and physical-chemical property phrases in more than 30 European and Asia Pacific languages.

Revision Alerts

The enhanced solution also includes innovative change management features that enable users to quickly determine what has changed on the MSDSs, and track the impact of any changes on their business. Key data points-- such as GHS/CLP classification and labeling data, product identification, revision date, composition, and impact on regulatory lists – are regularly cross-referenced to ensure that users are referring to the most recent version of the MSDSs.

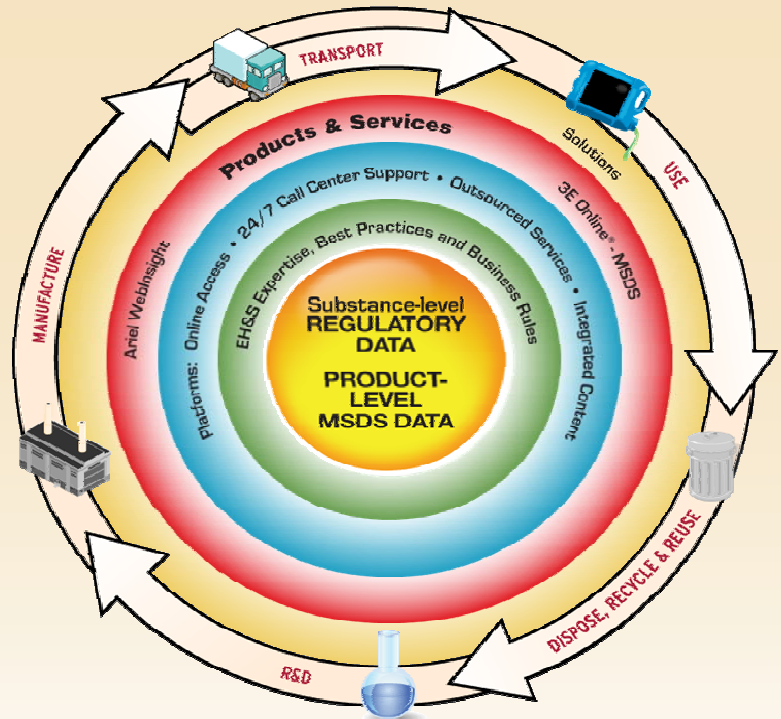

GHS/CLP Classification and Labeling		GHS/CLP Classification and Labeling
