## New Product Alert: Ariel Rules Builder

### Overview

As part of the Ariel Expert Rule Sets for SAP EHS Management, 3E offers an application designed to further support SAP users in generating Material Safety Data Sheet (MSDS) content. The Ariel Rules Builder features a simple interface used to configure and generate rules required to automate the document authoring process in SAP EHS. This easy-to-use application provides the ultimate in flexibility and control for SAP EHS users when applying complex rules logic.

### How it works

Based on pre-defined criteria, the rules assign content to multiple characteristics in the SAP Property Tree from where the content is then pulled and populated into the various sections of an MSDS. The Ariel Rules Builder application is installed and configured with the latest SAP EHS Property tree and active phrase library. Once configured, the application is ready to modify existing and/or author new rules content.

### Content Packages

The first release of content for Ariel Rules Builder includes Ariel Phrase Assignment Rules – GHS. These rules include content that is based on GHS Classification criteria. For example, a substance classified as Acute Toxicity, Category 1, Dermal will trigger the assignment of certain phrases in the respective SAP EHS Property tree characteristics from where they will be available to be picked up for population on an MSDS.

### Benefits

- **Minimum IT Expertise Required:** User-friendly interface creates rules for automated population of content into the SAP EHS Property Tree.
- **Total Automation of Entire MSDS:** The combination of Ariel Expert Rules Sets and Phrase Assignment Rules – GHS enables users to fully automate the authoring of a *complete* MSDS document in SAP EHS.

EH&S Expert

***It's the Content that Counts***

At the core of Ariel solutions for SAP is the massive collection of global chemical regulatory content aggregated, refined and maintained by 3E's own team using documented best practice methodology and a rigorous quality assurance process. More than 300 multi-national organizations, including 70% of the world's largest chemical manufacturers, rely on Ariel content on a daily basis. The breadth of countries covered and depth of regulatory and legislative information provided offer unprecedented support for identifying, monitoring and complying with ever changing EH&S requirements.

***A Unique and Powerful Combination***

3E Company has a successful and proven track record spanning more than a decade for providing quality products and services designed specifically for integration with SAP EHSM. Our highly experienced implementation team has worked with more than 50 companies using SAP. Ariel solutions for SAP offer the industry's most powerful combination of rich global regulatory content, scientific data, multilingual content, rules and sophisticated data loading and management tools to enable optimum efficiency and increased value out of the SAP EHSM system.
